

VEGA Management Hub for Key & Locker Cabinets

SEAMLESS SECURITY. AUTOMATED MANAGEMENT.

The **VEGA Management Hub** is a ready-to-use computer that acts as the control centre for every VEGA cabinet and locker. It connects the physical storage units to the IBSSweb Security Management System, allowing easy tracking of all user activity, managing who has access, and updating all device settings automatically.

Key Benefits

Enhanced Security

Reduce the risk of unauthorised access with advanced verification and approval workflows.

Operational Efficiency

Make managing, locating and auditing keys faster — cutting delays across shifts.

Regulatory Compliance

Meet strict audit requirements with detailed, tamper-evident logs of every key transaction and access event.

Scalable Architecture

Scale from a single department to a complete enterprise by adding cabinets and selecting the appropriate console tier.

Key Features

Centralized Management

Configure, monitor and generate reports for dozens — or hundreds — of cabinets and lockers from a single, intuitive interface.

Granular Access Control

Define user roles, assign permissions per key or locker, and apply time-of-day schedules — a policy engine, not a duty roster.

Advanced Booking Workflow

A formal reservation system. Users apply for temporary access; designated managers approve or deny — every decision timestamped.

Multi-Factor Verification

Enforce high-security policies that require two or more authorised users to sign off a specific key-group retrieval.

Comprehensive Audit Trails

Detailed logs of every system event — retrievals, returns, Late-Return, door openings — searchable from one place.

Seamless IBSSweb Integration

A dedicated gateway relaying all cabinet and locker data to the IBSSweb server for unified enterprise reporting.

Typical Applications

Government & Public Safety

Data Centers & IT

Healthcare & Pharmacies

Educational Institutions

Electric Energy & Critical Infrastructure

Manufacturing & Industrial

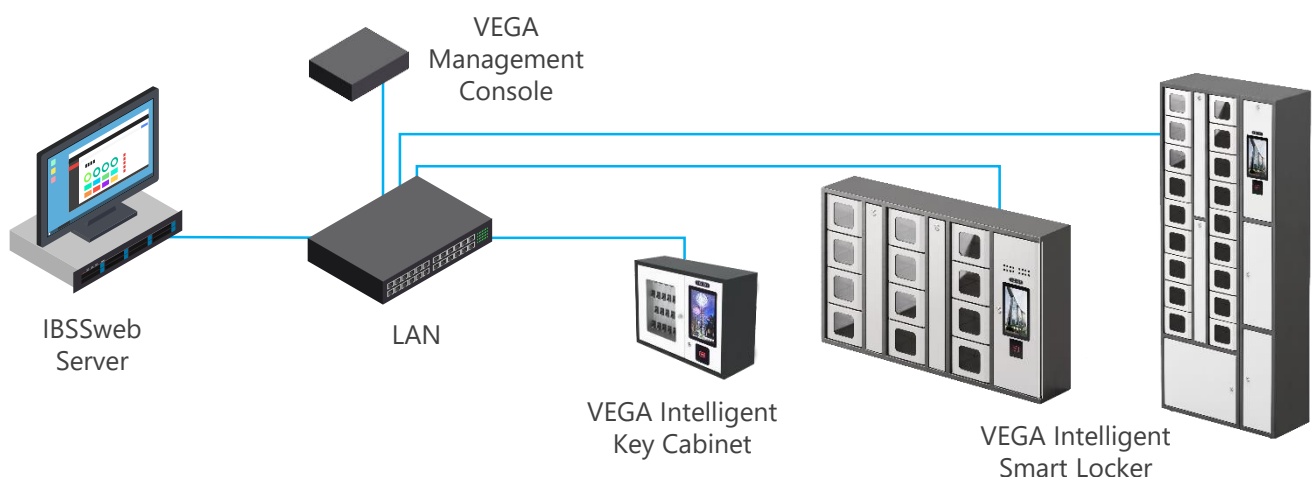

Public Transportation depots

Airports & Aviation Facilities

System Architecture

Technical Specifications

Specifications	VG-KMSC-20	VG-KMSC-50	VG-KMSC-100
Max. Key Cabinets/ Lockers	20	50	100
CPU	N Series	Core i5-equivalent	Core i7-equivalent
RAM	8 GB	16 GB	16 GB
Storage (SSD)	256 GB	512 GB	1 TB
Connectivity	TCP/IP		

Note: Specifications are subject to change without prior notice.

Ordering Information

Model No.	Product Description
VG-KMSC-20	VEGA Management Console for 20 Cabinets
VG-KMSC-50	VEGA Management Console for 50 Cabinets
VG-KMSC-100	VEGA Management Console for 100 Cabinets
VG-KMSC-C	VEGA Custom Management Console

Note: A VG-KMSC-C custom console is available on request, engineered for deployments where the standard tiers fall short.
